

Small overall dimensions

A small-footprint downlight, from 46 to barely 51 mm, with a small flange and helical optics designed to fit inside the body. This smart solution makes the product easier to install.

Visual comfort

Depending on how the light is positioned, its beam can be optimised using the appropriate accessory. The honeycomb filter screens secondary light and reduces direct glare, while maintaining the same high and diffuse quality. If the light is installed in a grazing position and you wish to light only part of the wall, you can use the darklight filter to section part of the beam and prevent direct glare even close to the source.

The range

A wide range of lighting options, including three optics: spot, medium flood, and flood. There are also three sizes, and a choice of AC or DC. The Orma_C downlight range includes CJ swivel versions, which can be adjusted with a screwdriver without opening the body.
